Oxfordshire Literacy Difficulties

Policy and Advice 2016

Produced by the Oxfordshire School Inclusion Team (OXSIT)
Oxfordshire Literacy Difficulties
- Policy and Advice 2016

The Oxfordshire Literacy Difficulties Policy and Advice aims to provide schools with evidence-based guidance on the assessment and support of pupils with literacy difficulties. The types of difficulty that pupils may experience, including dyslexia, are discussed, and suggestions made for assessment materials that will help schools analyse barriers to learning. An updated version of the Oxfordshire Literacy Assessment Pack (LAPack) is included.

Recommendations are made for intervention programmes that have been used successfully in schools across the county. Each child is an individual and provision should be carefully matched to need: some pupils will fit comfortably into an intervention group, while others may need individually tailored support.

This document, in conjunction with the Oxfordshire Guidance for SEN Support, will help schools plan the best provision for their pupils. Advice is also given on building school capacity to support literacy difficulties, with strategies for inclusive teaching and effective ways of working with parents.

Oxfordshire Literacy Difficulties Policy

Introduction
The Oxfordshire Literacy Difficulties Policy and Advice is designed to give schools clear guidance on supporting pupils with literacy difficulties.

Principles
Oxfordshire Local Authority recognises that literacy difficulties create a barrier to learning and achievement. The principles of good practice are:

- Teachers take responsibility for the learning of all pupils, including those with literacy difficulties.
- Teachers take notice of individual differences and adjust their teaching accordingly.
- Class teaching is inclusive and promotes independent learning skills.
- Detailed assessment informs teaching and provision.
- Assessment is culture-fair and literacy difficulties are identified irrespective of language, culture, socio-economic status, race and gender.
- Intervention and support is evidence based.
- Intervention work is rigorously evaluated to ensure that it has sufficient impact.
- Early Years teachers are aware of the risk factors for literacy difficulties, and identify pupils at risk as early as possible.
- Intervention occurs as early as possible to prevent pupils falling further behind and frustration impacting on behaviour.
- Pupils with literacy difficulties make accelerated progress in order to catch up with their peers.
- Pupils’ feelings about their difficulties are taken into account and pupils are involved in their own target setting and planning their own provision.
- Parents’ concerns are listened to and parents are kept fully informed about their child’s difficulties and the support that the school is providing.
- Teachers and support staff are trained to recognise and support pupils with literacy difficulties, including dyslexia.

The Literacy Difficulties Advice gives schools guidance on:
- The causes of literacy difficulties and other related difficulties
- Assessment and monitoring of literacy difficulties, including early identification and assessment of pupils with English as an Additional Language (EAL)
- Teaching and learning, including Teaching Assistant support
- Interventions
- Building capacity of the school to support pupils with literacy difficulties
- Working with parents
- Working with pupils to plan their learning
- Extra support that is available to schools from the Local Authority
Literacy Difficulties Advice

Introduction
Low literacy rates are associated with social exclusion, poor health, low educational attainment, offending, unemployment and lack of access to training and skills. Low literacy undermines individual confidence, happiness and resilience. National research shows how patterns of achievement are set in families during a child’s early years.

- Approximately 7% of children leave KS2 achieving below level 3
- 10% of boys leave KS2 reading below level 3
- Acquisition of NVQ Level 1 numeracy or literacy skills raises the probability of employment by about 5 percentage points.
- Having a secondary qualification reduces the risk of adult depression by 5% to 7%.
- A child from a deprived home has heard on average just 13 million words by the age of four, compared to 45 million in a more affluent home. (Hart, B. & Risley, T.R. “The Early Catastrophe: The 30 Million Word Gap by Age 3” (2003, spring). American Educator)

This Literacy Difficulties Advice is designed to give schools guidance on including pupils with literacy difficulties in the curriculum and for providing support for pupils to overcome their difficulties. There is advice on working with individual pupils, as well as on building school capacity to deal with literacy difficulties generally.

Aims
To provide schools with the advice and guidance they need to meet the diversity of children’s literacy learning needs through appropriate provision in mainstream settings.
To promote partnership with parents
To enable schools to provide a range of high quality support for pupils with literacy difficulties by:

- Raising awareness of literacy difficulties in all schools by ensuring that all staff are trained to support pupils in the classroom to at least the level presented in national training programmes, such as the Inclusion Development Programme and Department of Education e-learning modules
- Ensuring that parents are fully informed about pupils’ learning and that parental concerns are acknowledged and addressed
- Improving assessment and intervention practice so that children’s learning differences are identified and teaching is adjusted as early as possible in a pupil’s school career and continually throughout all key stages
- Making teachers aware of further training opportunities
Reasons for Literacy Difficulties

For some pupils biological factors will adversely affect their ability to acquire literacy skills:

- global developmental delay or generally low ability
- poor hearing or vision
- poor short term or working memory difficulties
- specific learning difficulties, such as dyslexia, dyscalculia or developmental coordination delay (DCD)/dyspraxia
- poor spoken language skills – receptive and/or expressive
- poor attention

Literacy is built upon language, so if a pupil has poor language skills or has had poor experience of language they will be approaching literacy from a low starting point. An assessment of language skills can often inform provision for language work, and it is essential that any literacy provision is implemented in the context of also addressing wider language deficits.

For some pupils environmental factors will impact on their literacy skills:

- lack of experience of literacy and books at home
- lack of preschool experience
- poor school attendance
- cultural factors
- lack of appropriate teaching
- low self esteem

It is impossible for schools to make up for what pupils may have missed out on at home, but reading to and sharing books with children is a vital part of preparing them for literacy.
The Simple View of Reading
The diagram below illustrates the interaction between language comprehension and word recognition skills. Depending upon which quadrant they fall into, pupils may need support in both areas.

Dyslexia
'Dyslexia' comes from the Greek meaning ‘difficulty with words’ and is used to describe a learning difficulty that hinders the acquisition of literacy skills. The British Psychological Society Report (BPS, 1999) working definition of dyslexia describes this as follows:

'Dyslexia is evident when accurate or fluent word reading and/or spelling develops very incompletely or with great difficulty. This focuses on literacy learning at the word level and implies that the problem is severe and persistent despite appropriate learning opportunities. It provides the basis for a staged process of assessment through teaching.'

Dyslexia is a continuum with no clear cut off point. The characteristic features of dyslexia are difficulties in:

- identifying and manipulating the sounds in words (phonological awareness)
- retaining an ordered sequence of verbal material (verbal memory)
- processing familiar verbal information such as letters and digits (verbal processing speed)
- visual memory, tracking and processing

Dyslexia occurs in pupils of all intellectual abilities and research has shown that it is not valid to identify dyslexia on the basis of a discrepancy between cognitive ability and attainment in literacy.

If it is known that good quality intervention has been put in place and the pupil has a persistent difficulty, this suggests that the pupil’s difficulties are of a dyslexic nature. Dyslexia is not a medical diagnosis and can be identified by monitoring the pupil over time. An independent Educational Psychological assessment is not needed for ‘diagnosis.’
Schools should use the Oxfordshire Guidance for SEN Support to assess pupils' needs. Section C of the guidance can be used to find out which areas of learning are causing the pupil difficulty and the more detailed descriptors help to unpick difficulties further. For pupils with difficulties around literacy it is important to look at the descriptors for SpLD. The SEN guidance also gives ideas for further assessment and possible intervention. https://www.oxfordshire.gov.uk/cms/content/school-support-special-educational-needs

Co-occurring Difficulties
Dyslexia is essentially a difficulty with word level literacy skills; however, it may co-occur with other difficulties. For instance a large proportion of pupils with Attention Deficit Hyperactivity Disorder (ADHD) also have dyslexic difficulties. Difficulties often co-occurring with dyslexia are in:

- language
- motor co-ordination
- mental calculation
- concentration
- personal organisation

These difficulties are not in themselves markers of dyslexia. When assessing pupils it is important to look across the whole range of their abilities and difficulties to be able to tailor provision to meet their specific needs.

Development Coordination Delay (DCD) and Dyscalculia are recognised as separate specific learning difficulties, but can co-occur with dyslexia.

Developmental Coordination Delay (DCD) or Dyspraxia
There are many common indicators between dyspraxia and dyslexia and many children present with elements of both. Dyslexic pupils tend towards poor organisation, poor spatial awareness and some difficulties with social situations. However, this is by no means true for all pupils with dyslexia, or necessarily for all those with dyspraxia. Both conditions have a wide range of characteristics with a significant cross over.

It is good practice to have a baseline assessment so progress can be measured. The sections on SpLD in the Oxfordshire Guidance for SEN Support provide some ideas for assessment and intervention for motor difficulties, as does the Move to Learn booklet from the Oxfordshire Childrens’ Occupational Therapy service. For those with elements of dyspraxia some of the following may help to support independence.

- practising what they can’t do
- doing what they want to do
- doing what they NEED to do
- avoiding what is difficult and likely to persist
- seeking out strengths
Teachers should give pupils opportunities to practise skills repeatedly until they are embedded. It is also useful to help pupils prepare for some activities such as PE by creating a checklist or by decreasing support incrementally as each small skill is learnt. A focus on content rather than on presentation when marking work will help foster self-esteem and confidence. Support the drawing of tables, 2D and 3D shapes. Consider using a visual timetable or checklist to develop independence. The important thing is that many of these pupils will manage to develop other strategies to cope with their disability if they are supported to develop independence through scaffolding and practice. If the problem persists despite focused intervention contact the Occupational Therapy Service.

or
oxonchildrens.therapies@oxfordhealth.nhs.uk

The Occupational Therapists also run a free Move to Learn course for teachers. Contact the service for details.

The Oxfordshire branch of the Dyspraxia Foundation run activities for children with dyspraxia and offer support to parents. The current contact is Julie Lambert at julie.e.lambert@sky.com

**Dyscalculia**

Dyscalculia is the name given to a condition that affects the ability to acquire arithmetical skills. The research into this learning difficulty is still at an early stage, but suggests that there is a deficit in ‘numerosity’ or ‘number sense’. Dyscalculic learners may have difficulty understanding simple number concepts and lack an intuitive grasp of numbers. Even if they produce a correct answer, they may do so mechanically and without confidence. They have little intuitive feel for numbers and little understanding of concepts and principles of logic and often find it difficult to learn number facts and procedures.

Arithmetical development is dependent on the ability to ‘subitise’. Subitising is the instant recognition of the numerosity of a set of objects, for example to see that there are 3 people without needing to count them. Therefore children with dyscalculia may count all items in a set because they are unable to subitise, i.e. for 5 + 3 they would be unable to hold up one hand and three fingers, but would need to count them all out one by one. Many children can become stuck at this developmental stage if finger flashing and subitisation are not developed at home or within EY/KS1. A dyscalculic child may find subitising and retaining dot patterns extremely difficult even with consistent support.

The following definition is from the American Psychiatric Association (2013): *Developmental Dyscalculia (DD) is a specific learning disorder that is characterised by impairments in learning basic arithmetic facts, processing numerical magnitude and performing accurate and fluent calculations. These
difficulties must be quantifiably below what is expected for an individual's chronological age, and must not be caused by poor educational or daily activities or by intellectual impairments.

The following are generally agreed to be symptoms of dyscalculia but may also be present in children with more general mathematical learning difficulties:

- Has difficulty when counting backwards.
- Has a poor sense of number and estimation.
- Has difficulty in remembering ‘basic’ facts, despite many hours of practice/rote learning.
- Has no strategy to compensate for lack of recall, other than to use counting.
- Has difficulty in understanding place value and the role of zero in the Arabic/Hindu number system.
- Has no sense of whether any answers that are obtained are right or nearly right.
- Tends to be slower to perform calculations. (Therefore give less examples, rather than more time).
- Forgets mathematical procedures, especially as they become more complex, for example ‘long’ division.
- Addition is often the default operation. The other operations are usually very poorly executed (or avoided altogether).
- Avoids tasks that are perceived as difficult and likely to result in a wrong answer.
- Weak mental arithmetic skills.
- High levels of mathematics anxiety.

(British Dyslexia Association website, August 2015)

Research estimates that about 5% of the population will have dyscalculia, but that in the UK 25% may have more general mathematical difficulties.

As with dyslexia, dyscalculia is often co-current with other learning difficulties, so again use the Oxfordshire Guidance for SEN Support to look at each pupil’s individual profile of needs. ‘Diagnosis’ of dyscalculia is difficult, but as with dyslexia it is more a case of observing over time rather than through one-off assessments. However, the Sandwell Early Numeracy Test (GL Assessment) is useful in unpicking any pupils’ strengths and weakness in maths.

Pupils with dyscalculic difficulties will need opportunities for a good deal of over-learning. There needs to be an emphasis on helping pupils develop strategies for solving calculations and problems, a development of ‘number sense’ and place value, and experiences provided to help them develop images of number that will help them understand the concepts. Many maths books and sites specifically recommend Cuisenaire rods as structured apparatus to help children with dyscalculia develop understanding. Ronit Bird and Jane Emerson are authors with very practical ideas for working with
children with dyscalculia to develop number sense. As with any provision, adjustments need to be tailored to the needs of the individual.

‘Dyscalculia friendly’ classrooms promote models and images to develop understanding, overlearning and use of working walls to support memory and an emphasis on helping children to use what they know to derive further number facts. A classroom where maths is seen as fun, where the explanation rather than the answer is valued and where speed is not over emphasised is helpful in reducing maths anxiety.

For information on specific maths interventions refer to the Oxfordshire Primary Support Maths Team at http://schools.oxfordshire.gov.uk/cms/content/primary-support-team

This link gives an interesting example of what the possible difficulties a pupil may have http://learn.familyzone.co.za/dyscalculia-explained/

**Poor Comprehension**
Research has shown that pupils with poor reading comprehension often have even poorer verbal comprehension, so it is important to put some language provision in for these pupils. A full guide and suggested activities are given in the Oxfordshire County Council (OCC) Reading Comprehension document. This covers five areas for the development of comprehension skills:

- establishing context and accessing prior knowledge
- vocabulary
- sequencing
- inference
- prediction

**Poor Short Term and Working Memory**
Pupils with literacy difficulties will often have difficulty with short term and working memory. ‘Short term memory’ allows us to hold a piece of information for a short time, e.g. remember and repeat a few digits, whilst ‘working memory’ allows us to hold and manipulate the information, e.g. reverse the digits. Learning is much harder for pupils who struggle with these areas of memory. These pupils will need the opportunity to over-learn skills in a multi-sensory way that enables them to use their sensory pathways to lock in the learning.
Monitoring and Assessment

Tracking pupils
School tracking systems allow teachers to monitor pupil progress closely. Any pupil failing to make progress should be assessed as outlined in the Assessment of Individuals section on page 13 and support put in accordingly. Pupils with SEN need to be making accelerated progress in order to catch up with their peers. An Individual Pupil Tracker can be used to track pupils through interventions and monitor progress as they move through the school. Using a Pupil Profile is a useful way of sharing information about a pupil’s learning with staff and parents. An example of a pupil profile for a child with SPLD is provided on page 12.

Early Identification and Intervention
Early identification is a key factor in improving outcomes for children. Children’s brains are very flexible and intervention put in at a young age can benefit pupils at a neurological level and improve their life-long learning and achievement.

Use of the Early Years Foundation Profile, Development Matters and Oxfordshire’s Guidance for SEN Support will help teachers to understand pupils’ strengths and difficulties, and help identify areas where they may need support. Development Matters can be found on the Foundation Years website:

Guidance for SEN Support can be found on the Oxfordshire intranet under SEN at:
https://www.oxfordshire.gov.uk/cms/content/school-support-special-educational-needs

These assessment documents encourage teachers to notice learning differences from the earliest years in school and to adjust their teaching accordingly. Early identification of literacy difficulties is vital and teaching should be adjusted from Foundation Stage onwards.

The key risk factors for literacy difficulties are:
- speech difficulties post 5 years
- difficulty acquiring letter knowledge – both sounds and letter names
- poor phoneme awareness and difficulty sounding out words for reading
- poor ability to segment and manipulate phonemes for spelling

It is better to monitor and support pupils who appear to be ‘at risk’ in this area, than to delay intervention and allow them to fall further behind.
### Example of a pupil profile for a pupil with dyslexic difficulties

#### Pupil Profile

**ANALYSIS OF NEED:** Molly is not yet secure in her phoneme/grapheme links. She can recognise letters by their name but is not always able to identify their sound, which hampers her decoding. She struggles with blending and segmenting and with most digraphs and trigraphs. She is insecure about rhyming and rhythm. Her comprehension is good and she is able to retell a story orally. Molly has a good grasp of mathematical concepts but is sometimes hampered by her inability to read the question. Her written and organisational skills mean that she records numbers incorrectly on occasion. She can be disorganised, forgetting equipment and books for example, but this is improving. Her ball skills are poor.

**STRENGTHS:** Molly has very good friends who support her well. She is aware of her difficulties and is able to talk about her feelings. She is managing her frustrations well. Her parents are very supportive and read with her regularly at home. She is a bright pupil, very articulate with excellent knowledge and understanding. She has a love of stories and narrative and a rich vocabulary.

**STRATEGIES FOR SUPPORT:**

- Ensure Molly has a buddy to help with reading of texts
- Regular intensive intervention such as FFT reading programme to support decoding skills
- Highlight columns in maths book in different colours so that she gets the numbers in the right place
- Support with drawing diagrams
- Allow Molly to record her ideas on occasion
- Develop use of laptop
- Build confidence by allowing her to be the expert in class where appropriate
- Ensure that any homework is well within her skill level to cut down on frustration
- Focus on literacy only where appropriate and support her to access other aspects of the curriculum through targeted support, peer support, technology and teacher input to build success.

**OUTCOMES:** To secure Molly’s phonic knowledge, so that she has instant recall of all graphemes. To secure her blending and segmenting skills (Sound Linkage). For Molly to be able to read books that are of sufficient interest for her to enjoy.
Assessment of Individuals
The school needs to build a full picture of the pupil's strengths and difficulties, and this is often only reached by collecting assessment evidence over time.

Class based literacy assessments:
- Assessment of progress through the National Curriculum
- Achievement of individual learning targets
- Day to day assessment against learning objectives
- Analysis of pupil’s written work
- Use of Checklists in drawing together observations from 'Assessment for Learning' (AFL)
- Information from parents e.g. family history

The British Dyslexia Association suggests that if after 12 weeks a child has not made progress under normal dyslexia-friendly classroom teaching, the teacher should refer the child to the SENCO.

More detailed assessments that the school may include are:

Standardised Reading and Spelling Tests
Standardised tests measure the pupil’s reading or spelling against peers of precisely the same chronological age. The average standardised score is 100, with 68% of pupils falling between 85 and 115. Pupils with a standardised score below 85 may meet the criteria for SEN Support, so pupils with scores approaching this should be looked at in detail. Pupils with a standardised score of 80 or below will experience a significant level of difficulty.

Salford Sentence Reading Test (2013) is easy to administer and can be used with all children to measure progress and pick up pupils falling below age appropriate reading levels. The test gives scores for decoding and comprehension.

Young’s Parallel Spelling can be used with whole classes, small groups or individuals for monitoring reading progress and picking up pupils having difficulties with spelling.

Neale Analysis of Reading (NARA II), York Assessment of Reading Ability (YARC) and Diagnostic Reading Assessment (DRA) analyse reading in more detail and compare reading accuracy with comprehension levels, giving separate standardised scores for each. The Neale and York are suitable for primary schools, whilst there is a secondary version of the York, and the DRA is for age 11+.

The Phonics and Early Reading Assessment (PERA) is a standardised test matched to the Letters and Sounds Framework and the requirements of the DfE Year 1 ‘Phonics Screening Check’, as well as to the teaching and assessment needs of schools both before and after the statutory test. Pera 2 can be used to assess Year 2 pupils retaking the Phonic Check.

List of Assessment Materials 2015

Salford Cohort Tracking Sheet

GRT Cohort Tracking Sheet
Formative Assessment

The Literacy Assessment Pack (LAPack) included in this guidance, is a formative assessment that helps to unpick how the pupil is doing with the basic skills of reading. It is recommended for use with pupils in KS1 and KS2 and for some pupils in KS3.

It contains sections on:
- Phonological skills
- Sight vocabulary
- Sound/letter knowledge
- Knowledge of phonic patterns

The LAPack is an excellent tool not only for assessing pupil’s skills, but for monitoring over time and recording small steps of progress between NC levels. The LAPack Flow Chart helps to identify appropriate interventions following assessment with the LAPack.

Literacy Assessment Pack

Flow Chart to show possible interventions for pupils having difficulties on the Literacy Assessment Pack

Letters and Sounds Tracking Sheet

Checklist for Assessing Handwriting

Running Reading Records and Miscue Analysis provide evidence of how well a pupil is reading independently. They are an invaluable way of assessing and analysing the reading strategies a pupil is using or neglecting, giving diagnostic information about a pupil’s reading strengths and weaknesses. Learning objectives can be identified to target the development of specific strategies. An analysis of the accuracy rate is useful for ensuring that a pupil is reading books at the appropriate level, neither too difficult nor too easy but offering a suitable level of challenge for the pupil.

To quantify a running record; work out the accuracy rate by dividing the number of words read by the number of errors:

\[
\text{number of words read} \div \text{number of errors} = \text{accuracy ratio}
\]

<table>
<thead>

</tr>
<tr>
<td>1:9 and below</td>
<td>Below 90% accuracy</td>
<td><strong>Frustration Level</strong>&lt;br&gt;Too many challenges for pupil to absorb new learning.</td>
</tr>
</tbody>
</table>
Additional Tests

Other tests that may be useful are:

**Phonological Assessment Battery (PhAB)** for looking at phonological skills at a higher level than the LAPack. The picture and digit naming speed tests can be used for measuring processing speed, and can be used for assessing access for extra time at KS4.

**British Picture Vocabulary Scales (BPVS 3)** measure the pupil’s understanding of vocabulary in isolation. This may be useful with pupils who have scored poorly on a comprehension in a standardised reading test, or for pupils in Early Years/KS1 with poor language development.

**Raven's Coloured Matrices** looks at a pupil's non-verbal reasoning skills. If a pupil is having literacy difficulties this can be a useful assessment for looking at the pupil's underlying general ability.

**QCA checklists can be used** for an assessment of social, emotional and behavioural difficulties that may affect, or be affected by, poor literacy

**Renfrew Action Picture Test** is a standardised test of oral language looking at grammatical structures.

**An Observation Survey of Early Literacy 3rd Ed. (Marie Clay 2013)** presents a battery of assessment covering a broad range of literacy skills including: concepts about print, individual word reading, reading in context, writing, letter knowledge and phonic knowledge. The assessment tasks are designed for systematic observation of young children as they learn and each task in the survey has been carefully structured for consistent delivery.

**It may be necessary to consult with outside professionals such as:**

- A Speech and Language therapist(SLT)/Language and Communication Advisory Teacher (LACAT) if the pupil appears to have an underlying language difficulty
- An occupational therapist if the pupil has poor motor control
- An educational psychologist if the pupil has more wide spread difficulties, or the school has been unsuccessful in helping the pupil to make progress.

It is always worth asking parents/carers to organise hearing and eyesight checks, as poor hearing and sight can have a huge impact on a child’s ability to learn to read.

It is also valuable to ascertain the pupil’s own perception of his/her strengths and weaknesses and what s/he thinks works and what is less effective. When pupils are involved in setting their own learning targets, they are often much more motivated to succeed.
Assessing children with EAL and children from ethnic and cultural minorities

Particular care needs to be taken when assessing children with English as an additional language (EAL) and children from ethnic and cultural minorities, including travellers and refugees. The Equality Act (2010) dictates that schools provide equal opportunities for all pupils. Professionals need to be vigilant to ensure that their practice is not discriminatory. All teachers and non-teaching staff need to be aware of the linguistic and cultural bias of resources such as books and standardised tests, and should be alert to the risk of identifying a literacy difficulty where none is present or failing to identify a learning difficulty through an assumption that the issue is purely EAL.

Research evidence suggests that the response to pupils with English as an additional language who have poor phonological skills should not differ from their monolingual counterparts. However, the interpretation of data for individual pupils needs to take full account of the learning opportunities available.

The booklet EAL or SEN? Guidance for schools in identifying and assessing children in Key Stages 1 and 2 with English as an Additional Language, who may also have special educational needs will be helpful in deciding on provision that may be needed for pupils. This can be found on the intranet at: http://portal.oxfordshire.gov.uk/content/public/LandC/Childserv/sen/advisory/EAL_or_SEN.pdf

Further advice on working with pupils with EAL can be provided by the Oxfordshire School Inclusion Team at SchoolImprovementTeam@Oxfordshire.gov.uk
Teaching and Learning

The Teaching of Reading
The Rose Report (2007) concluded that for the majority of children synthetic phonics taught in a structured way is the most successful way of learning to read, though the report emphasised that phonics must be taught within a context of rich language work and experience of books. However, the small minority of children with severe difficulties may also benefit from other teaching methods or a more holistic approach to literacy, such as Reading Recovery or the FFT Reading programme. All children need good language skills in order to fully develop their reading skills. Vocabulary is the greatest predictor of reading ability at age 11, and without the understanding of the syntax and semantics of language reading cannot progress, however well the phonics are taught. Many children come into school with an impoverished experience of language and literacy; they have poor spoken language and little experience of books. It is important that these experiences and skills are developed alongside the phonic work.

Letters and Sounds provides excellent guidance on the teaching of phonics. It is a programme designed for Foundation Stage, but is a useful resource for teaching pupils with literacy difficulties whatever their age. The programme has six phases which introduce phonics in a developmental way. Phase 1 develops phonological skills and it is essential to continue this work alongside the following five phases, so that pupils develop the necessary phonological skills to meet the demands of increasingly more complex phonic work.

Many schools use other phonic programmes, such as Read, Write Inc or Jolly Phonics. Whatever resources are used it is important that pupils, especially those having difficulty, continue structured phonic work until they are secure in all phonic patterns. However, if pupils are struggling with phonics, other approaches, such as the teaching of sight words and re-reading familiar books, can help them take their first steps into reading. More holistic literacy approaches, such as Reading Recovery and Fischer Family Trust Reading Programme help pupils to develop skills in all aspects of literacy and are highly effective.

Language Work
Language delay or difficulties can seriously delay the acquisition of literacy skills. Literacy is dependent upon spoken language, so it is important to develop pupils’ language alongside their literacy. Rich language work in Early Years can help to build the foundations of reading. Development Matters at www.foundationyears.org can help pinpoint the level of language acquisition of pupils in Early Years. For older pupils the British Picture Vocabulary Scales can be a useful tool for looking the understanding of vocabulary, and this gives a standardised score, which can help to measure the severity of difficulty. If a pupil is presenting a particular concern, then it is very useful to refer them to the SENSS Interaction and Communication Service for an assessment and advice by a Speech and Language Therapist or LACAT. Information about this team and a referral form can be found on the Oxfordshire Schools intranet:
http://schools.oxfordshire.gov.uk/cms/content/communication-and-interaction-support-service

Many schools across the county are successfully using the Spirals programme (Developing Language and Communication Skills through Effective Small Group, 3rd Ed. by Marion Nash with Jackie Lowe and Tracy Palmer, Routledge 2011) as an initial intervention in Foundation Stage for pupils who appear to have poorer than age-equivalent language. This programme has been very successful in many settings, and such early intervention will help to prevent pupils falling behind. There are also Spirals programmes for KS1, KS2 and for specific areas of the curriculum, such as maths and science.

The Reading Comprehension document on the intranet has lots of ideas for developing language skills, and your LACAT will be able to offer advice and support for individual pupils.

Inclusive Teaching and Learning for those with Literacy Difficulties

A truly inclusive school makes all pupils into successful learners. To do this, teachers need to know where a pupil is in their learning and what very small next-steps are needed in order for them to make progress. In order for all teachers to know where pupils are in their learning they need access to fine-tuned assessments and they need to use an effective Assessment for Learning (AfL) approach to teaching and learning.

One of the major barriers to achievement for pupils with literacy difficulties is being rendered dependent on adults to help them learn. This will always happen if the work set is not within the capabilities of the learner. Pupils with SEN like ‘hard work they can do’ (Lamb Review 2010). If children are constantly working beyond their current skill level they may well be at risk of ‘learned helplessness’ or of displaying a range of diversionary and delaying tactics. Pupils need opportunities to apply their skills, working collaboratively with other children and independently. To become increasingly independent learners, pupils will need:

- to be regularly assessed using fine-tuned assessments and formative assessment so that everyone is absolutely clear about what small step they need to take;
- independent tasks within their current capabilities that have been clearly explained and modelled for them;
- regular feedback on how they are progressing;
- scaffolded support in pairs or small groups;
- adult guidance to try out learning with collaborative support before having a go on their own;
- clear guidance to support organisational skills;
- teacher awareness of the readability of texts and how to support access;
• careful planning of the use of TAs to guard against overdependence;
• a range of easily accessible resources to aid independent work;
• regular teaching by a teacher in a small group rather than always being taught by TAs;
• focused, regular and consistent intervention to support the development of skills.

All pupils need to access a sequence that moves them from dependence on the teacher, through modelled, shared and guided group activities to a point where they are sufficiently skilled and confident to work independently on their own.

Adjusting the teaching

Teaching Assistant Support
Pupils with literacy difficulties will often have some support in class from a teaching assistant (TA). The aim of the support is to allow them access to the written curriculum. It is vital that teachers plan carefully for the use of TAs so that the pupil does not become overly dependent. Teachers should consider planning for these pupils as if they have no support so that they are essentially planning the very next step in their independent learning. TAs can then support the development of these independent skills and work with other members of the class.

All pupils with literacy difficulties benefit from short, focused interventions to develop their skills. TAs will need to be well trained to deliver these interventions, which should be based on well-founded research and be proven to accelerate progress.
Intervention

For pupils who are really struggling with literacy, even outstanding classroom teaching is unlikely to address all their needs. However, it is important to use good quality intervention materials and to monitor the progress pupils make in order to evaluate the impact. TAs need to be properly trained to deliver sessions and monitored for quality assurance. Research shows that short, intense interventions have as much impact as those that carry on for longer. However, for pupils with severe levels of difficulty, daily sessions are needed for learning to be secured and maintained. Intervening as early as possible prevents pupils falling behind further. What Works for Children and Young People with Literacy Difficulties, Greg Brooks 2013 gives an overview of successful interventions nationally, and below are summaries of intervention materials that have shown to be effective in schools across Oxfordshire.

The Importance of Multi-sensory Teaching and Learning
Pupils with dyslexia and other literacy difficulties need the opportunity to over-learn skills and knowledge. Poor short term and working memory, as well as slow processing skills, can make learning arduous. Doing things in different sensory ways - visually, aurally, orally and kinaesthetically – helps build neural pathways in the brain, and the more sensory pathways are built up, the more secure the learning.

Phonological Skills Interventions

Launch Into Reading Success
This was designed as a group intervention for Year 1 children at risk of reading difficulty, and is an auditory training programme to develop phonological skills. It consists of 9 sections with 66 activities, which are all outlined clearly and for which resources are provided. It can be run by an experienced TA with support from the teacher. To some extent Letters and Sounds Phase 1 covers these skills, but this programme can be useful for pupils struggling at this early stage.

Sound Linkage
This is a programme of phonological skills training for pupils in KS2 consisting of 5 minutes a day 1-1. It can be done in isolation, but can also be used as part of a longer tailored package for pupils with higher levels of need. It includes:

- Phoneme segmentation
- Phoneme blending
- Phoneme deletion
- Phoneme substitution
- Phoneme transposition
- Phonological linkage activities
Phonic Interventions

Letters and Sounds

*Letters and Sounds* gives really good guidance on the order in which to teach phonics. If pupils struggle with learning phonics they still need to complete all 6 phases, otherwise they will be missing essentials aspects of phonics knowledge. Phase 1 develops phonological skills that are vital to learning and using phonics, and those skills need to continue to be taught as pupils progress through the other phases. *Letters and Sounds* can be used as a teaching guide for phonic intervention throughout every key stage. The *National Strategies KS2 Phonics Intervention Programme* will help schools adapt the guidance for older pupils.

The following links might be helpful in showing how the cross reference from *Letters and Sounds* to the new *National Curriculum*.

*New National Curriculum* matched to *Letters and Sounds* phases

Letters and Sounds FAQ

Acceleread Accelewrite

This programme uses a talking word processor programme to give auditory feedback to pupils, to develop their auditory and phonological skills. Any talking programme can be used: Clicker, Texthelp, Read and Write, Write: Outloud, and Talking Textease, but Clicker 5 is probably the best. Sessions are designed to run for 15 minutes a day for 4 weeks (20 sessions) but a shorter term also works well. Pupils can return to the programme again at a later date. Pupils memorise sentences from cards then type them into the computer, listening to check sounds and self-correct where possible. A TA needs to supervise to pick up errors missed by the pupil. The cards present phonic patterns in developmental order, so assessment is needed to find the starting point for pupils. The LAPack Flow Chart will help. Keeping a chart of their progress through the programme helps pupils to see the steps they are taking and gain confidence.

Read Write Inc and Freshstart

There are several *Read Write Inc* programmes providing a systematic approach to literacy, covering the teaching of reading, writing, spelling and comprehension.

- Read Write Inc Phonics - Systematic literacy programme rooted in phonics (ages 4-7)
- Read Write Inc Comprehension – literacy programme for children who can read (ages 7-9)
- Read Write Inc Comprehension Plus- (ages 9-11)
- Read Write Inc Spelling- 10 minutes a day spelling programme (ages 7-9)
Read Write Inc Freshstart- intervention for struggling readers (ages 9-11)
These can be used as independent programmes or as a whole-school approach to literacy. Schools in Oxford City with high numbers of pupils with SEN and EAL have used this programme successfully. Read Write Inc Freshstart is a programme for older pupils who are struggling with reading. It is designed for KS2, but has also been used successfully in a few county secondary schools.

Word Level Interventions

Precision Teaching
This is a really good way of monitoring and embedding multi-sensory teaching, and of speeding up reading for pupils who are struggling with decoding skills. It is a useful way of helping pupils learn letter sounds, sight vocabulary as well as times tables and other number facts. Using the precision grid alone is not enough to embed learning, so multi-sensory practice alongside this, is essential.

- Daily focussed session of multi-sensory teaching 1:1 or in a small group: 5-10 minutes
- Each pupil then individually completes a precision grid for 1 minute
- Sessions should be daily –less than 3x a week is not worth doing

When addressing sight vocabulary, it is useful to focus on high frequency words (HFW). All HFW lists are pretty much the same. The list from Letters and Sounds was revised most recently, but the Dolch list is very similar. The current National Curriculum has example words for each year group which relate to the phonic patterns and spelling rules pupils should be learning. However, older pupils who are struggling with phonics and spelling may be better to focus on the words they will use most often. John Taylor's Freebies website has a tool for creating personalised grids very quickly.

http://www.johnandgwyn.co.uk/

Letters and Sounds High Frequency Word List
Dolch List

Reading Interventions

Fischer Family Trust (FFT) Literacy Programmes
These three programmes are designed to be run by Teaching Assistants with the support of a teacher. Schools will be required to send both a teacher and a TA to training sessions. The Oxfordshire Partners in Learning (OPL) team run training under licence from the Fischer Family Trust.

FFT Wave 3 Reading Programme
This is a 1:1 programme designed for children in Y1 who are working within and below Book Band 2 in reading and Level 1c or below in writing. However, it has also been successfully used for older children, including secondary pupils, and those working at slightly higher levels of literacy. The programme
uses an approach based on the principles of Marie Clay’s Reading Recovery with daily sessions of 20 minutes running for a maximum of 22 weeks. The focus for sessions alternates between reading and writing.

Data collected from Oxfordshire schools shows that pupils made an average gain of 2.2 NC sub-levels or 3.86 APS in writing in 20 weeks. There was an average rise of 3.05 book bands. However, there is a larger rise the lower the starting point.

**Every Child a Reader (ECAR)**
ECAR is a strategy of layered intervention, built around Reading Recovery, for quickly raising attainment in literacy. It offers the capacity for whole school impact through managed and targeted layers of literacy support. OPL Primary Support Team runs training for Reading Recovery, Boosting Reading Potential and Talking Partners under licence. See details of each programme below.

**Reading Recovery**
Reading Recovery is often described as the ‘Rolls Royce of literacy interventions’ and is at the heart of ECAR. It is a short-term intervention for children who have the lowest achievement in literacy learning. A highly trained Reading Recovery Teacher works individually with these children for 30 minutes each day for an average of 12-20 weeks. The goal is for children struggling with literacy to develop effective reading and writing strategies. The majority of children taking part in the programme reach age related expectations or above and able to approach typical classroom tasks successfully. ECAR also supports a number of ‘lighter touch’ TA lead interventions to support reading, comprehension and spoken language. [http://ilc.ioe.ac.uk/rr.html](http://ilc.ioe.ac.uk/rr.html)

**Talking Partners@Primary**
TP@Primary is a successful small group intervention programme which gives children the basic life skills of how to be good communicators; it gives children the opportunity to develop the skills to listen attentively and talk confidently. TP@Primary promotes risk-taking, raises self-esteem and independence, develops interactive listening and an awareness of the audience and produces measurable progress in speaking and listening. It is a TA led 10 week intervention for pupils from Foundation to Year 6.

**Boosting Reading Potential @Primary (BRP)**
BRP is a TA-lead intervention. It is a targeted, time-limited, one-to-one intervention over 10 weeks. It is designed to improve the way children read, enabling them to be independent problem solvers who read with understanding and enjoyment. The programme is for pupils in KS1 & KS2 who:

- Lack skills and confidence as readers
- Require a boost to their reading age
- Need to develop their understanding of texts
Project X Code
It embeds systematic synthetic phonics into a gripping series of adventure books that is targeted at struggling readers in Years 2 to 4 who are not on track to achieve appropriate levels for their age. This includes:
- children who have had problems with the Year 1 phonics screening check
- children whose reading is still not fully secure at the transition from Year 2 to Year 3
Edge Hill University, in partnership with Oxford University Press, provides training to help teachers or teaching assistants to deliver it effectively to children who need a helping hand to develop phonics and comprehension skills and a love of reading. The training ensures maximum impact from the intervention.
https://readingsupport.edgehill.ac.uk/rs-for-schools/project-x-code/#sthash.cMCvI6ZS.dpuf

Rapid Readers
This reading scheme from Pearson is colourful and engaging. There is an emphasis on comprehension with questions for discussion at the end of each book. There is also software available that allows pupils to read into a computer which will then highlight words they have read incorrectly and prompt them to self-correct. Pupils who are reluctant to read aloud are more confident reading into a computer. Boys particularly seem to enjoy the IT aspect and find the books interesting. Schools using the scheme have been very successful in accelerating progress in reading.

Comprehension Interventions

New Reading and Thinking
These six booklets provide work on inferential comprehension at an increasingly complex level. The reading age of Book 1 is about 7 years and Book 6 is about 9 years. However, books can be used with pupils with a lower reading age either by doing the activities as listening comprehension or by buying the accompanying audio CDs. Pupils working through the books have shown huge rates of improvement both in comprehension and in overall NC Reading levels. Pupils can work 1:1, but can also benefit from small group discussion. Answers do not need to be written; it is the thinking process that is the important part.

Hi Five
Hi Five is designed for groups of 1-4 pupils from Y5 or above, working at a low Level 2 with a RA of 6.5 to 7.0. There are 4 sessions a week, each lasting 15-20 minutes, for a minimum of 10 weeks. One chapter of text is used each week.
The focus of sessions is as follows:
Session 1 Guided reading and clarification
Session 2 Re-reading, questioning and summarizing
Session 3 Supported writing
Session 4 Editing
Writing Interventions

Write Away Together
This programme can be run 1:1 or in small groups (4 max). It is based on Assessment for Learning, and works at the editing stage of writing. A piece of the child’s independent writing is used for discussion and improvement. The programme is suitable for any pupil, from those who are beginning to write a couple of sentences to those who are gifted writers.

1stclass@writing
1stClass@Writing is a structured ‘light touch’ intervention for a small group of up to 4 pupils of 7-9 years old who struggle to write confidently and accurately. It is particularly suitable for pupils who need to work on key elements of transcription (spelling, handwriting, grammar and punctuation) and to apply these skills to compose a range of writing.

1stClass@Writing is an Every Child Counts Literacy programme developed by Edge Hill University. Teaching assistants (TAS) are trained to deliver it by an accredited Every Child Counts literacy trainer. The training runs alongside the delivery of the intervention in the training term.

Monitoring and Evaluating Interventions
All interventions used need to be rigorously evaluated. Assessing pupils at the beginning and end of a programme of work shows what impact the intervention has had. The assessments used do not always need to be complicated or time consuming. Sections of the LAPack can sometimes suffice. The Table of Assessments for Different Interventions has suggestions of suitable assessments. Schools need to ensure that interventions are effective. See Monitoring and Evaluating section on p20.

List of Intervention Materials

Flow Chart to show possible interventions for pupils having difficulties on the Literacy Assessment Pack

Assessments to track interventions
ICT to Support Literacy and Maths

There are a number of programmes available to support pupils with literacy difficulties. The ones included here are those that are used in schools across the county and are recommended by the SEN/ICT team.

Clicker 6
Clicker 6 is the most recent edition of this programme, (though some schools may have older versions), and is suitable for primary pupils. The programme allows pupils to word process, but gives the teacher options for providing support in different ways. Grids of words and/or phrases can be set up that relate to class topics or are specific to the individual. Pictures can be added and the programme can be set to read back the text written. There is an option to add a library of symbols and sets of words can be downloaded from the website, as well as a predictive text option. However, teachers need to be aware that pupils may still need adult support to use this programme. 

WriteOnline
WriteOnline is designed for secondary pupils. This has an organisational mind mapping tool to help pupils plan their writing, and other features include: word bars, writing frames, predictive text and speech feedback. There is also the facility for pupils to login from home.

Co:Writer
Co:writer has similar feature to WriteOnline, but is compatible with other programmes such as MS Word, Google, blogs and email, so is more suitable for KS4/5. Features include, predictive text, word banks and screen reader. As the pupil writes, the programme interprets spelling and grammar mistakes and offers word suggestions in real time. 
http://donjohnston.com/cowriter/

Splash! City
Splash! City produces 3 programmes to support pupils with SEN in maths.

Splash! Infant
This programme is aimed at all children between the ages of 4 and 7 but it has been specifically designed for children with special needs, so may be suitable for children over 7 working at KS1 level. It has activities for drawing, making patterns, sorting, measuring, and using numbers.

Splash! Junior
This programme is an extension of Splash! Infant designed for 7-11 year olds, and has the additional features of number square and number line tools and lets pupils set out and solve number problems.
 Splash! Senior
Aimed at 11+ pupils, this programme includes drawing, geometry, measuring, and manipulating number, chemical and algebraic problems. In addition, technical diagrams and graphs can be completed easily and there are comprehensive resources which can be personalised to maths, chemistry and physics syllabuses.

http://www.splash-city.com/

Touch Typing
There are a variety of touch typing packages, including Dance Mat, which is free online.
http://www.bbc.co.uk/guides/z3c6ftr
However, research has shown that pupils who struggle with handwriting also struggle with typing. If when a pupil places their fingers on the home keys they are unable to move individual fingers up and down independently, they will struggle to touch type using all their fingers and may be better to find their own method of typing.

The OCC SEN/ICT team are part of SENSS, but are only able to support pupils with complex needs.
http://schools.oxfordshire.gov.uk/cms/content/sen-ict-aac-team
Building Capacity Within the School

Expertise within a school is often built up around the specific children on roll at any one time. As staff come and go expertise changes and it is important to continually update and refresh training. Schools build capacity to deal with pupils with SEN by maintaining high levels of training and ensuring that when teachers and TAs leave other staff are trained in their skills. In promoting good practice Senior Leaders and SENCOs should make clear that:

- all teachers are teachers of all pupils, including those with special educational needs and literacy difficulties
- all teachers should notice individual differences in learning style and adjust their teaching accordingly
- good practice for dyslexic pupils is good practice for all

Staff training

Training all staff to be aware of literacy difficulties, how to identify pupils with difficulties and how to include them within classroom teaching is perhaps the most important step a school can take. Evidence from Ofsted and SEN Reviews carried out in the county shows that schools are most successful with pupils with SEN when inclusive teaching within classrooms is good; when teachers are able to identify the next small steps in each pupil’s learning and adjust the teaching to ensure those steps are met. Schools with good intervention programmes are able to move pupils’ literacy skills on, but unless those pupils have a good experience back in the classroom, those skills are not always maintained and utilised, and may not impact on progress through NC levels. *The Inclusion Development Programme: Teaching and supporting pupils with dyslexia* (DfE 2011) provides training for all staff, teachers and TAs, in four modules:

- understanding and supporting reading
- understanding and supporting spelling
- a focus (awareness of difficulties)
- adapting practice

This gives good guidance on supporting pupils within the classroom, and is a good starting point for improving the teaching of literacy across the school. The programme takes about 2 hours to complete individually, but discussion with colleagues can help staff to share good practice. The self-evaluation can help to audit existing skills and pinpoint parts of the resource that are most useful.

*Inclusion Development Programme: Teaching and supporting pupils with SLCN* (DfE 2011) is equally helpful in developing staff understanding of language issues and how to support pupils within the classroom.

http://www.idponline.org.uk/

There are also advanced e-learning modules on the DfE website covering dyslexia and SLCN and other difficulties. These are designed for teachers wanting to develop a deeper understanding of areas of need.
Further training for Teachers and Teaching Assistants
Oxfordshire School Inclusion Team (OXSIT) runs training courses for Teachers and Teaching Assistants on:
- Dyslexia Awareness
- SpLD for Teachers
- Dyslexia for Teaching Assistants
- Assessment
- Inclusive Teaching and Learning
- Fischer family Trust Programmes – FFT Reading Programme, Write Away Together and Hi Five

Inclusion Consultants are also available to do bespoke training for individual schools. Contact your inclusion consultant or vulnerable.learners@oxfordshire.gov.uk

The Oxfordshire Primary Support Team runs training for Project X Code and 1stclass@writing, and also for Reading Recovery teachers. primarysupportteam@oxfordshire.gov.uk

All training delivered by Oxfordshire teams is advertised in the Oxfordshire Partners in Learning brochure: http://schools.oxfordshire.gov.uk/cms/content/oxfordshire-partners-learning-0

Training for Specialist Teachers
Oxford Brookes University in conjunction with OXSIT runs a year’s Postgraduate Certificate of Education (PG Cert) in Working with Children and Young People with Literacy Difficulties. Teachers who complete this course then have the option of working towards the Associate Member of the British Dyslexia Association (AMBDA) and/or an MA.
For details contact Georgina Glenny at goglenny@brookes.ac.uk

Assessment
Ensuring that the school has good assessment procedures in place is vital not only for tracking progress, but for unpicking pupils’ difficulties and working out what provision will help them. Use the Assessment of Individuals section (p13) to decide the best assessments to use with each pupil and which assessment materials are most useful for the school. Ensuring that the SENCO and Foundation Stage teachers are confident about identifying pupils at risk of literacy difficulties in Early Years, will mean that support can be put in place before problems worsen and pupils fall further behind.

Intervention
It is important to take an evidence-based approach to intervention, and ensure that interventions used have been demonstrated to have successful results. The Intervention section on p20 will help, as the interventions recommended are ones that have been used successfully throughout the county, but
colleagues in other schools may be able to make recommendations too. Use the LAPack Flow Chart to help build up a bank of resources that address the various areas of need your pupils show. Inclusion Consultants will be very happy to advise on interventions if you have any queries.

Making links between in-class provision and intervention can be tricky, but crucial in helping pupils to generalise their learning. It is really important that the class teacher knows exactly what a pupil is learning and particularly what new skills s/he has gained, so that they can target teaching accordingly. Some schools are following up on interventions with classroom support in the following term to help pupils consolidate the skills they have gained. Having the TA who is delivering an intervention also supporting in class can also be effective.

**Flow Chart to show possible interventions for pupils having difficulties on the Literacy Assessment Pack**

**Monitoring and Evaluating**
Implementing intervention programmes is not just about buying resources. Teachers and TAs delivering them need to be properly trained and monitored. Above all, provision must be rigorously and frequently evaluated. Pupils need to be making at least twice the rate of progress e.g. 6 months gain in reading at the end of a 3 month intervention. Where this is not happening teachers need to investigate the cause – it might be that the intervention did not take place regularly, the assessments may not have been done rigorously enough to indicate the starting point, the intervention may have been unsuitable for the pupil or the intervention was not delivered effectively. The SENCO’s role in this cannot be emphasised strongly enough. Much time can be wasted on poorly delivered provision that makes no significant difference. Assessing pupils before and after an intervention not only shows how much they have progressed, but indicates where they need to go next.

**Assessments to track interventions**

**Using Data to Inform Practice**
Data can help identify pupils at risk as well as support the tracking of those already identified. Raise Online data can be used to identify trends and to plan future action. School tracking data will give a detailed picture of which groups of pupils are making accelerated progress and those where the gap is widening. Tracking the progress of pupils with SEN rigorously in comparison with their peers shows whether the attainment gap is closing. Targeting resources and provision to support literacy enables pupils to access other areas of the curriculum. Schools need to focus on early intervention rather than waiting until pupils start falling further behind.
Working with Parents

Promoting parent partnership
Parents’ concerns regarding their children’s progress should be acknowledged and addressed promptly and constructively. If parent and school have differing views about a child’s progress it is the school’s responsibility to collect evidence of the pupil’s performance to inform discussion. Teachers need to be confident in being able to explain children’s literacy difficulties to parents and in communicating how teaching is being adjusted to help the child.

Parents’ worries need to be dealt with sensitively. Having a clear, detailed picture of the child’s strengths and difficulties shows parents that teachers know their child, and sharing ideas about how the school can help, will reassure them that their child is being supported. The Prompt Sheets for Parents may be useful.

Prompt sheets parents

It is also important to remember that some parents have literacy difficulties themselves, and their own experiences at school may make meetings very difficult for them. They may not be confident about supporting their children’s reading at home, so find ways in which they can help. Perhaps make sure that the child can read books independently before they take them home, so that the parent can still hear them read without feeling they need to teach them.

Some parents will find it difficult to accept that their child has a difficulty. Using the questions below to talk about family background may help them to see similarities with other family members. It is important that information given by the school is accurate and detailed, and that the picture is built up over time. Explaining the assessment process, interventions and support the school is giving to the child, can reassure parents that the child has been accurately assessed and that their needs are being addressed.

In meeting parents, teachers may find the structured conversation presented in Achievement for All (National Strategies 2010) a useful guide. This gives a framework that can help to give focus and momentum to meetings.
Seeking information from parents

Parents can give very useful information about their child that can aid understanding of their difficulties with literacy. Here are some ideas that can be used as prompts when talking to parents.

**Literacy**
- Does your child enjoy literacy activities at home, e.g. reading, hearing stories, nursery rhymes?

**Early Development**
- At what age did your child reach developmental milestone, such as walking, talking

**Health**
- Has your child had illnesses that have affected language, motor skills and education?
- Has your child had hearing and sight checks?

**Language**
- When did your child start talking?
- Has your child ever had speech therapy?
- Has your child ever had glue ear or hearing problems?

**Motor skills**
- When did your child start walking?
- How well can they do things involving motor skills, both gross and fine motor skills e.g. sports, ball skills, riding a bike, drawing, buttons?
- Which hand do they prefer to use?

**Family background**
- Has anyone in the family had difficulties with literacy?
How can parents help?
Most parents are eager to help their children’s literacy skills, but may need some guidance. A consistent approach to reading between home and school is helpful, and home/school communication books can support this. ‘Paired reading’ and ‘pause, prompt, praise’ can be useful for parents, and guidance on these, as well as ways to help with spelling can be found in the Prompt Sheets for Parents section.
Working with Pupils

Promoting pupil participation
Pupils should be regarded as active participants in the learning process. They should be encouraged to take an active role in their own learning by helping to set their own targets, identifying helpful and less helpful support strategies, and receiving prompt feedback on their progress. The older the pupil the more important this process becomes.

Pupils are generally much better motivated to learn when they have identified their own targets. These may not be the targets the teacher would suggest, but confidence has a huge impact on learning, and it is vital to build and foster self-esteem.

Helping pupils to understand the difficulties they have can influence how they overcome them and improve their self-esteem. For instance, explaining to a pupil that they have dyslexic difficulties, which make learning to read difficult for them, and describing how the school will support them can improve pupils’ attitude to their difficulties. Knowing that they have a specific difficulty that is not their fault and realising that they are not considered unintelligent can be extremely empowering, and raise their self-esteem dramatically. Other pupils may not respond in this way, so it is important to know your pupils and spend time listening to how they feel about the difficulties they are having.

The Useful Teaching Strategies section contains resources that may be helpful for pupils.

Useful teaching strategies
Local Authority Support

Local Authority Agencies
As mentioned in the Monitoring and Assessment section, the school’s Education Psychologist (EP), Speech and Language Therapist (SALT), Language and Communication Advisory Teacher (LACAT), Special Needs Advisory Teacher (SNAST) or Occupational Therapist (OT) may be able to help unpick a pupil’s difficulties and give advice on intervention and support work.

The Oxfordshire School Inclusion Team (OXSIT)
The Oxfordshire School Inclusion Team offers a range of training centrally, and can offer bespoke training to schools and partnerships. Inclusion Consultants are available to advise schools on provision. Schools can buy Special Needs Advisory Support Teacher (SNAST) and Dyslexia Assessment and Intervention Service (DAIS) support on an annual basis, but are also able to pay for an assessment and advice visit for individual pupils by contacting their Inclusion Consultant. Use the Working with Pupils with Literacy Difficulties Flow Chart on the next page to determine the best course of action, but contact your Inclusion Consultant for advice at any point where you feel uncertain.
Information: www.oxsit.org.uk
Contact: vulnerable.learners@oxfordshire.gov.uk

The Oxfordshire Primary Support Team
The Oxfordshire Primary Support Team English consultants also deliver central training, as well as offering bespoke work around developing literacy more generally across the school. The team includes a trainer for Reading Recovery.
primarysupportteam@oxfordshire.gov.uk

Oxfordshire Partners in Learning
All training delivered by Oxfordshire school improvement teams is advertised in the Oxfordshire Partners in Learning brochure:
http://schools.oxfordshire.gov.uk/cms/content/oxfordshire-partners-learning-0
Working with pupils with literacy difficulties

Building School Capacity

Have you trained staff using the Inclusion Development Programme (IDP) for Dyslexia?
Support available from Inclusion Consultants

Have you trained staff using the IDP for SLCN?
Support available from SENSS Communication and Interaction Service

Has SENCO monitored inclusive classroom practice, and given advice and guidance?

Is the school tracking pupil progress to identify difficulties early?

Have staff attended relevant OCC courses?
See OXSIT INSET Calendar

Have staff attended training for FFT Interventions?

Have any teachers taken the Oxford Brookes Working with Children and Young People with Literacy Difficulties Course?

Worried about pupils’ literacy?

Has SENCO monitored inclusion in the classroom practice, and given advice and guidance?

Use Literacy Assessment Pack (LAPack) and follow advice in Assessment section page 13.

Have you considered wider language difficulties?
Refer to Communication and Interaction Service

Does pupil have other difficulties?
See Comorbidity section on page 7.
Use QCA checklist to assess behavioural difficulties (Inclusion Handbook page D41)

Plan appropriate intervention for at least 2 new terms.
Refer to the Intervention section on page 20.
Ensure that target setting is appropriately ambitious
Consider staff training needs.

Monitor and record number of sessions and evaluate progress. Has pupil made the equivalent of 2 or more sub-levels of progress per year? Are you still concerned?

Evidence of progress?

Still concerned – progress is not adequate?

Continue to monitor

Evaluate reasons for lack of progress and consider alternatives.

Email Inclusion Consultant if more support needed

Are you still concerned?

No
Continue intervention

Yes
Consult Inclusion Consultant and Dyslexia Assessment and Intervention Service (DAIS).
